CERTIFICATIONS

 **AWS Certified Cloud Graduate**

PROFESSIONAL SUMMARY

Full-stack developer with 4+ years of professional experience building scalable web and cloud applications. Specializes in JavaScript, TypeScript, Node.js, React, Java, and Spring Boot, with hands-on experience designing REST APIs, implementing RBAC, and architecting cloud-integrated systems on AWS and Azure. Strong focus on backend performance, database design (PostgreSQL, MongoDB), and delivering clean, maintainable code in collaborative agile environments.

EXPERIENCE

Angular Minds Pvt Ltd

July 2022 – Present

Full-Stack Developer

- ▶ Developed and maintained production web applications using React, Angular, and Node.js, serving real-world enterprise clients.
- ▶ Designed and implemented REST APIs with JWT-based authentication, RBAC middleware, and role-level authorization across multiple modules.
- ▶ Built cloud-integrated solutions on AWS and Azure, including multi-account cost monitoring, resource scanning, and automated billing pipelines.
- ▶ Optimized backend services for performance at scale using PostgreSQL query tuning, connection pooling, and scheduled background jobs.
- ▶ Implemented responsive, accessible frontend interfaces adhering to design systems and cross-device compatibility standards.
- ▶ Participated in code reviews, mentored junior developers, and contributed to engineering standards across the team.

KEY PROJECTS

Clipboard Manager – Linux Clipboard History App

clipboardmanager.surajkolhe.com ↗

Electron React TypeScript Node.js SQLite Tailwind CSS

- ▶ Built a keyboard-driven clipboard history manager for Linux (GNOME/Wayland) as an Electron desktop app — Super+Shift+V browses and pastes any past clip instantly.
- ▶ Background watcher stores the last 100 clips in a local SQLite database with deduplication, pinned items, and fuzzy full-history search; fully local with no cloud sync or telemetry.
- ▶ Auto-registers a GNOME custom keybinding and simulates paste via wtype, xdotool, or Mutter D-Bus fallback; distributed as AppImage and .deb packages.

Moneta – Cloud Monitoring & Billing System

monetacloud.com ↗

React Node.js Express PostgreSQL AWS SDK v3 Azure API TypeScript

- ▶ Built a cloud cost optimization platform processing billing and usage data across multi-account, multi-region AWS and Azure environments.
- ▶ Automated scanners for unused and abandoned cloud resources using cross-account IAM roles and parallel region-aware discovery.
- ▶ Delivered React dashboards with data aggregation pipelines, RBAC, and performance-optimized reporting APIs.

Parental Control Application

[Next.js](#)[React Native](#)[Node.js](#)[Express](#)[PostgreSQL](#)

- ▶ Built a cross-platform parental control app with secure parent-child account linking and supervised access control.
- ▶ Implemented JWT authentication, role separation, and real-time usage reports with configurable screen-time restrictions.

AM Books – Enterprise Management System

books.angularminds.com ↗[Angular](#)[Node.js](#)[Express](#)[MongoDB](#)[Sequelize](#)

- ▶ Full-stack enterprise system with RBAC, admin-managed permission mapping, and invoice/quotation generation.
- ▶ Built automated email notifications via scheduled jobs and interactive dashboards with real-time employee status insights.
